# Monthly Traffic Summary

## Route 19 : Nanaimo – Gabriola Island

These tables and graphs show the actual number of vehicles\*\* and passengers boarding the ferry at Nanaimo Harbour or Gabriola Island, therefore representing the number of one-way trips made.

*\*\* Other charts showing Capacity Utilisation convert these vehicle numbers into AEQs (Automobile Equivalents) reflecting the fact that larger vehicles occupy more than one standard car length of deck space. The number of AEQs reported in any period will typically be between 6% and 7% more than the actual vehicle count, depending on the number of large commercial vehicles carried.*

To account for the fact that the length of each calendar month varies between 28 and 31 days, the graphs depict the DAILY average number of passengers and vehicles travelling, to even out the different lengths of each calendar month and offer a more accurate representation of seasonal variations. The graphs also take account of the extra day that occurs in February each leap year, so data for 2020 and 2024 is adjusted to reflect 29 days instead of 28.
